

**DATIM Release 1.20a** was deployed on January 26<sup>th</sup>, 2016.

DATIM v1.20a updates some core functionality in DATIM as well as resolving critical fixes that have been reported.

**Resolved Defects:**

**1. Event Reports failing to load**

An issue with event reports was resolved in a prior release (1.19a) with a configuration change to the servers. A permanent fix was implemented in this release. Users should not experience any change in system use with this fix.

**2. Feed fails to propagate from DATIM to FACTS Info**

The feed from DATIM to FACTS Info was failing due to a previous update to core code. This issue has been resolved in this release.

**3. Site Administrator Updates**

Changes to the Site Administrator Application (now called the "Maintenance" app) were made in this release, specifically updates to data visibility and accessibility. This release also enabled the Maintenance Application for Site Administrators.

**4. User Administrator application fix**

An issue was fixed in the User Administrator Application that prevented User Admins from managing user permissions within the application.

**Additional Updates:**

**1. Update to the timestamp added to DATIM on January 11<sup>th</sup>, 2017**

The timestamp that was added to DATIM on January 11<sup>th</sup> was updated. This timestamp is being used for data exchange purposes with DATIM4U nodes.

**2. DRC Site Deletion Request**

Updates to the Democratic Republic of Congo organizational hierarchy was made per the country's request.
