DATIM Release 1.21.g was deployed as a maintenance release on June 20th, 2017.

DATIM 1.21.g includes a several updates to the system.

Data Purge:

1. **Repurge of TB_ART and TB_STAT data from FY17 Q1.**

   The TB_ART and TB_STAT indicators were changed from quarterly to semi-annual indicators. As a result, any data entered against these indicators for FY17 Q1 was removed from the system. Due to caching, there were some values that still exist in these indicators, and those values have been removed.

Updates:

2. **Code list updates on DATIM Support**

   The DATIM code lists have been updated to reflect the following changes:
   - Code lists for MER data elements now include a data element description column
   - Code lists for mechanisms now include the Prime ID number
   - The following code lists have now been made public (they can be viewed without logging into DATIM):
     - SIMS v3: Facility Based Data Elements
     - SIMS v3: Community Based Data Elements
     - SIMS v3: Above Site Based Data Elements
     - SIMS v3 option sets
     - SIMS v2: Facility Based Data Elements
     - SIMS v2: Community Based Data Elements
     - SIMS v2: Above Site Based Data Elements
     - SIMS v2 option sets
     - Data Exchange: Tiered Support Data Elements
     - Data Exchange: Tiered Support Option Set

3. **Datastore updater application**

   An application has been added to be able to update the datastore settings for adding and removing periods in the Data Approval and Data Deduplication apps. This application is only for use by the systems team.
