

**DATIM Release 1.22.f** was deployed in the November 14, 2017 maintenance release.

**DATIM Ministry of Health (MOH) User Administration:**

In accordance with the PEPFAR/MoH data alignment initiative, the following updates were performed in DATIM:

1. Incorporated a new dataset that contains the data elements created by the MoH Aligned data collection activity. These data elements have MoH as their “service type” instead of DSD or TA.
2. Updated the User Administration module to allow for the addition of the MoH data stream.
3. Updated to allow new and existing Global, Interagency, and Agency users with the ability to view MoH data.

**DATIM User Administration:**

The following patches were deployed to address issues detected in the User Administration application:

1. Fixed issue where newly invited Global users were receiving “Unapproved Data Viewer” role; Newly invited Global users no longer receive this role
  2. Fixed issue that prevented Interagency User Administrators from viewing Agency users in the User Administration application if the Agency users had permissions that the Interagency User Administrator did not.
