

DATIM Release 1.23.e was deployed as a maintenance release on February 20th, 2018.

DATIM 1.23.e includes defect fixes and an org hierarchy update.

Defects Resolved:

- **When viewing the Deduplication application in Internet Explorer 11, the “Show DSD/TA Dupes” button was misaligned**

This button has been moved back to the correct position. This was a cosmetic issue and had no impact on the ability to select and dedupe DSD/TA duplications. Note that this did not affect any other browsers.

- **Totals not displayed for some data elements in the Data Approvals app**

For several indicators, the sub-total box in the Data Approvals app was not displaying a value. These were sub-totals calculated by DATIM and only impacted the following indicators:

- HTS_SELF
 - PMTCT_STAT (Denominator, but NOT the Numerator)
 - PMTCT_EID
 - PMTCT_HEI_POS
 - PMTCT_ART
-
