

**DATIM Release 1.28** was deployed on July 16, 2019.

DATIM 1.28 includes an organizational hierarchy change and a data element update.

**Update:**

- **Organizational hierarchy update:**

- Mozambique

- **Data element update:**

- All T\_PSNU data elements have been removed. These data elements were added to the system to support the COP 18 Target import process and are no longer needed. In order to avoid any future confusion, the decision has been made to remove these data elements. This data was not designed to be used for analysis or pivots, and removal of these data elements will not impact any of the other existing data in the system.

**If you have created a pivot table using one of the T\_PSNU data elements, that pivot table will be deleted.** Unfortunately, there is no way to maintain these pivot tables once the data elements have been removed.

If these pivot tables were in use and you need assistance recovering them, please contact DATIM Support.
