

DATIM Release 1.29.1 was deployed on April 14, 2020.

DATIM 1.29.1 includes Data Administration App updates, Integrity Checks, email updates

Update:

- **User Administration App updates:**

- This change solved the issue of slowness when a Global User Administrator opens the app.
- The User Administration App now gives users the option to first 'search' for a particular user (without loading the full list) instead of showing all the users as seen in the screen shot below.

- **Integrity Check:**

- Created the following integrity checks for dataapproval table to ensure that it does not contain invalid records that can lead to problems with the Data Approval App:
 - INTEGRITY_Approvals mismatch between org unit level and approval level
 - INTEGRITY_Approvals duplicates for given workflow, period, mechanism and level
 - INTEGRITY_Approvals not accepted at lower level and exist at higher level
 - INTEGRITY_Approvals level invalid for workflow
 - INTEGRITY_Approvals missing level

- **Email update:**

- The "Your DATIM account will expire in 14 days" email has been updated to be sent to users separately. Before this change, all users who received this reminder were grouped together in the same email.
